PROJECTS

- **CODER INVOICE**
Domain:Finance

Role:React JS Developer

Description:

- The sale of goods between the seller and the customer is maintained by the Coder Invoice application. The master files for the application are created such as the Company Details, Product Details, Customer Details, and Supplier Details. Using this, the price of the product is estimated by the Quotation Invoice. The outline of the Invoice (i.e) the product to be purchased is described in the Pro-forma Invoice along with its costs. Finally the Invoice is prepared from either the Quotation or the Pro-forma Invoice including the tax owned for the products. Then, after the payment is made, the Receipt will be generated. The purchased goods will be delivered to the customer with the Delivery Challan Receipt including the shipping details. If there is any damage on the purchased product then, it can be returned with a Credit Note.
- Developed Homepage and Employee page in React JS application. comprehensive mobile application designed to empower business owners and entrepreneurs. On our homepage, you will find a user-friendly interface that provides easy access to all the essential features and information you need.
- In the Coder Invoice app, The employee's role within the app may vary depending on their position and responsibilities within the organization Such as Profile, Access Control, Sales managements, Customer interaction, Reporting analysis.
